

Tackling Self Stigma Together

August 25-29, 2025 - Sevilla, SPAIN

TSST

Paper-Based New Feature Design

In this activity, your group will design one new feature for the Self-Stigma AI mobile application. The goal is to create an idea that could make the app more useful, engaging, and supportive for international users.

You will draw the feature using a phone screen template and write a short explanation about what it does, how it works, and which problem it solves. This is a creative exercise, so feel free to imagine new possibilities.

Instructions

1. Discuss with your group what kind of feature would help users the most.
2. Use the phone screen template below to sketch how the feature would look in the app.
3. Write a short explanation answering these questions:
 - What does the feature do?
 - How does it work?
 - Which problem does it solve?

 Phone Screen Template (Draw your feature here)
